

ACKNOWLEDGMENTS

For the material presented in this book, the author has drawn upon the heritage of learning from many different disciplines. For his first introduction to geology, many years ago, he wants to thank Dr. Ray S. Bassler; and for opening his eyes and mind to the more complex manifestations of the earth's interior, he is forever indebted to Stephan Riess. For their great interest and encouragement extended in this undertaking, he is indebted to Dr. Ralph Arnold, Mr. James G. Scott, Dr. Charles H. Tilden, Mr. Herbert Kern, Mrs. Gary I. Salzman, and Dr. Solomon Levy. He is grateful for the wholehearted cooperation extended by his wife Helen and their two sons Gil and Steve.

Michael H. Salzman

March 1, 1960.
Long Beach 15, Calif.

FOREWORD by Aldous Huxley	v
PREFACE	ix
ACKNOWLEDGMENTS	xiii
I. INTRODUCTION	1
The Continuing Struggle for Water	2
Population Growth	3
Population Shift in the United States	5
Industrial Growth in the United States	5
Periodic Droughts	6
Pollution of Streams and Lakes	7
Salt Water Encroachment	8
Radioactive Contamination	9
The Visit	10
Mining	12
Mine Waters	12
Fresh, Potable Water	13
II. WHAT IS WATER?	15
Matter and Environment	15
Water Fundamentals	17
Photosynthesis	21
Water Lost by Photochemical Dissociation, etc.	22
Unavailable Waters?	25
Water, the Mineral	26
Hydrogen	26
Oxygen	30
A Fixed and Immutable Quantity?	30

III. NEW WATER	33
Natural Occurrence	36
Accidental Occurrence	38
Predictive Occurrence	41
Simi Valley, Ventura County	44
Lakeside, San Diego County	46
Three Rivers, Tulare County	47
Tale of Two Cities	48
Avalon	51
Salton Sea Area	53
Mohave Desert	53
Negev Desert	55
Other Recent Wells	56
A. E. Nordenskiöld	57
About Drilling for Water in Primary Rocks by A. E. Nordenskiöld	58
IV. THE MODERN SCIENCE OF HYDROLOGY AND ITS LIMITATIONS	73
Saline Water Conversion	74
Cloud Seeding	75
Reclamation of Used Water	77
The Reduction of Evaporation	79
The Hydrologic Cycle	80
Circulation	80
Precipitation	81
Infiltration	82
Porosity and Permeability	83
Ground Water Reservoirs	84
Ground Water Surveys	86
Watershed Inventories	87
Run-off	87
The Limitations of the Science of Hydrology	88
Unconscious Delimiting	89
Conscious Delimiting	92
A Serious Gap	93

Geologist v. Hydrologist	95
Hydraulics	96
New Point of View	97
V. THE DYNAMIC EARTH	99
Origin of the Earth's Hydrosphere	101
Rock Systems, Alteration, and Earth Tides	103
Igneous Rocks and Magmatic Water	108
Metamorphic Rocks and Metamorphic Water	114
Volcanic Activity and Volcanic Water	117
VI. THE DYNAMIC EARTH (continued)	119
Stages of Magmatic Crystallization	119
Hydrothermal Deposition	122
Hot Springs	131
Geologic Thermometers	134
Laboratory Experiments	135
A Rebuttal	137
Isotope Geology	143
Structural Geology	144
Piezoelectricity, etc.	146
Summary	149
VII. MAN'S CHALLENGE	151
Science and Operationalism	152
Deserts	156
Afforestation	161
Municipal Water Supplies and Public Health	169
Man's Challenge	175
APPENDIX	182
REFERENCES CITED	183
